**ADVISORY NO. 160**  
Series of 2021

**New Entry Restrictions in Germany due to COVID-19 as of November 2021**

The German government in its recent issuance on the designation of international risk areas on 28 November 2021 retained the Philippines under the list of countries of High Risk Areas. The Philippines was initially included in the said list on 08 August 2021 due to the high incidence of spread of corona virus in the country.

Travelers from the Philippines who stayed here in the last ten (10) days before entering Germany must observe the following specific regulations:

- a. **Obligation to register:** Travelers who have previously stayed in a risk area are obliged to fill out the digital entry registration at <https://www.einreiseanmeldung.de> and to carry the received confirmation with them upon entry;
- b. **Special obligation to provide evidence:** Travelers who have previously stayed in a high-risk area must have a test, vaccination or recovery certificate with them and, in the event that a carrier is used, present the evidence for the purpose of the transport. If a traveler has previously stayed in a virus variant area, only proof of a test is possible. The evidence must be uploaded via the upload portal of the digital entry registration at <https://www.einreiseanmeldung.de> ;
- c. **Quarantine obligation:** People who have stayed in a risk area must go home immediately after arrival - or other accommodation at the destination - and isolate themselves for ten days ( home quarantine ). If the traveler previously stayed in a virus variant area, the separation period is fourteen days; and
- d. **Ending quarantine:** Quarantine at home may be ended early if proof of recovery, proof of vaccination or a negative test result is submitted via upload portal of the digital registration on entry at <https://www.einreiseanmeldung.de>. The individual link on the registration confirmation (PDF document) should be used to upload the proof of recovery, proof of vaccination or a negative test result. Quarantine can be ended in each case from the time the negative test result is submitted. If you spent time in a high-risk area prior to entry, the relevant test may not be conducted earlier than five days after entry (test to release possible from day five following entry). Vaccinated and recovered persons can end the quarantine from the time when the proof of vaccination or recovery is transmitted via the entry portal. If the transmission takes place before entry (strongly recommended), no quarantine is needed.

For the information and guidance of all concerned.
